Çekicin AI roadmap — what is done?

Status of the 6 requested AI modules · checked live on 26 October 2026 · DEMO

⚠️ DEMO — not inside the Çekicin mobile app yet. Accuracy figures are from tests, not from Çekicin's own data.

Requested module	Done	Measured result	Test it
📷 **1. Damage detection from the camera** Find the damage and the damaged part from a photo.	%70	84% damage caught · 15% false alarms	Site demo · Module section · Telegram /m1
🧱 **2. Replace / repair decision and cost estimate** Suggest repair, paint or replace, and estimate the cost.	%55	price range covers 58% of real listings	Site demo · Module section · Telegram /m2
🔩 **3. Spare-part suppliers and prices** Show spare-part suppliers and their prices.	%60	~93% of listings are the right part + car (new 2,618: 95%)	Site demo · Module section · Telegram /m3
🎙 **4. Voice guidance for customers with AI** Guide the customer by voice: understand speech and answer.	%55	95–97% of words transcribed correctly	Site demo · Module section · Telegram /m4
📍 **5. Free nearby-place search** Nearest repair workshop, parts shop, fuel, charging and tyre service (free data).	%80	a workshop within 15 km in 20/20 big cities (parts shop 18/20)	Site demo · Module section · Telegram /m5
🌱 **6. Waiting time and environmental impact** Effect on waiting time, emissions and road safety.	%30	simulation only — not validated with real data	Site demo · Module section · Telegram /m6

QUICK TEST LINKS (CLICK)

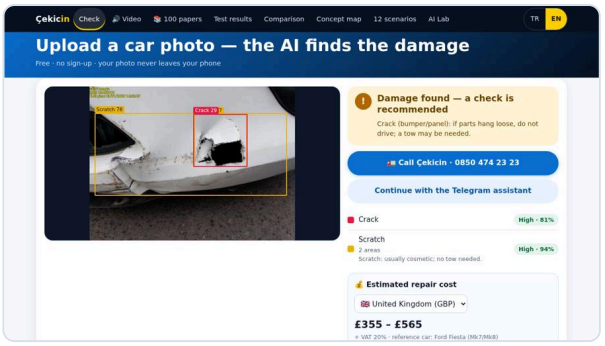

🌐 Roadmap site · 🧩 Modules page · 📷 Photo test · 🤖 Telegram bot · 📄 Report page · ✅ Status

How "done %" is set: the share of the requested function that works end-to-end in the demo (site + bot), discounted for what still needs Çekicin data or app integration. The measured accuracy is a separate number.

☁️ All site links point to the Cloudflare site (cekicin-site.elasa2next.workers.dev). If it does not open on your network, the same pages are on the mirror: mirror. · v1.1 · links updated 27 Oct 2026 (Cloudflare)

📷 1. Damage detection from the camera

%70 done

WHAT WAS ASKED

Find the damage and the damaged part from a photo.

MEASURED RESULT

84% damage caught · 15% false alarms

WHAT WORKS · HOW IT WAS MEASURED

Independent 1,000-photo test (VehiDE): finds the damage on 84% of damaged photos; false alarm on 15% of undamaged ones; damage-type macro-F1 0.63. Weak on wide scenes (device model 0/4).

RE-CHECKED TODAY

Live browser test today: close-up bumper photo → crack 81% + scratch 94% ✓. Light scratch on a truck (test image 01) → missed ✗. The cloud second opinion was over its daily free quota at test time.

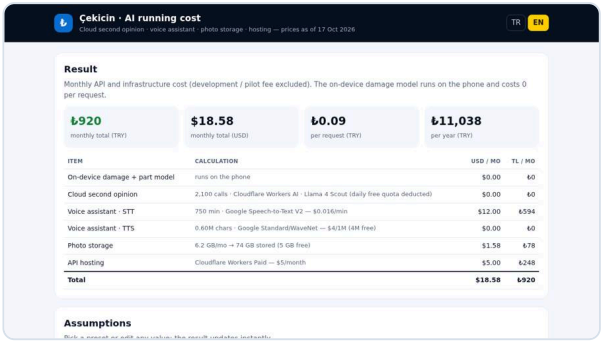

STILL MISSING

App integration, training on Çekicin's own photos, wide-scene improvement.

Site demo ↗ | Module section ↗ | Telegram /m1 ↗

🧱 2. Replace / repair decision and cost estimate

%55 done

WHAT WAS ASKED

Suggest repair, paint or replace, and estimate the cost.

MEASURED RESULT

price range covers 58% of real listings

WHAT WORKS · HOW IT WAS MEASURED

Cost model 1.2's new-part range covers 57.9% of 1,100 real listings; midpoint error ×1.36 on average. The replace/repair decision is rule-based and not yet checked against real assessor decisions.

RE-CHECKED TODAY

The same test shows a cost range per country (TR / DE / UK / US). API price lookup “Egea headlight”: 7 listings, median 10,240 ₺ ✓.

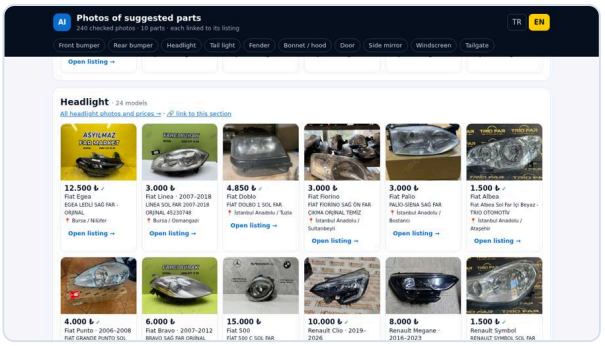

STILL MISSING

Calibration with real invoices / assessor reports (Çekicin data).

Site demo ↗ | Module section ↗ | Telegram /m2 ↗

🔩 3. Spare-part suppliers and prices

%60 done

WHAT WAS ASKED

Show spare-part suppliers and their prices.

MEASURED RESULT

~93% of listings are the right part + car (new 2,618: 95%)

WHAT WORKS · HOW IT WAS MEASURED

Price DB 2.0: 3,718 listings, 149 car types (121 models in Türkiye × 10 parts), 2,756 with a photo of the part. Manual audit of the new 2,618 (n=60): 95% right part, 100% right car, 95% photo shows the part; old 1,100: 87.5%. Asking prices (not sales), a snapshot; no live API.

RE-CHECKED TODAY

Price API returns listings with 3 checked photos ✓. Parts-photos page: 240 checked photos ✓. Bot 1.10.1 sends a photo album of the suggested part (unit-tested; live chat test waits for the AI quota).

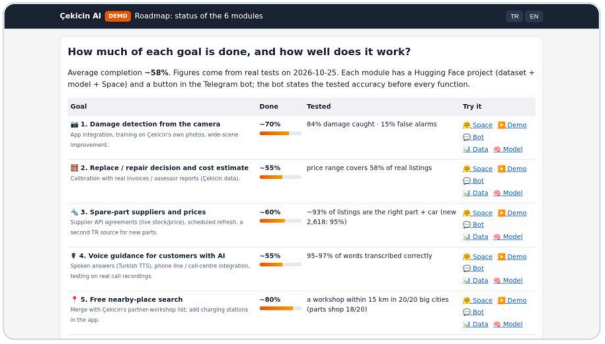

STILL MISSING

Supplier API agreements (live stock/price), scheduled refresh, a second TR source for new parts.

Site demo ↗ | Module section ↗ | Telegram /m3 ↗

🎙 4. Voice guidance for customers with AI

%55 done

WHAT WAS ASKED

Guide the customer by voice: understand speech and answer.

MEASURED RESULT

95–97% of words transcribed correctly

WHAT WORKS · HOW IT WAS MEASURED

12 Turkish driver requests (synthetic speech): word accuracy 97.4% clean, 94.9% in car noise (5 dB); key words (place, part, model) 91–97%. Real callers may be lower. Answers are text for now (no TTS).

RE-CHECKED TODAY

Bot webhook healthy (0 pending, no errors) ✓. Speech-to-text was not re-run today because it uses the same cloud AI quota; the last measurement is shown.

STILL MISSING

Spoken answers (Turkish TTS), phone line / call-centre integration, testing on real call recordings.

Site demo ↗ | Module section ↗ | Telegram /m4 ↗

📍 5. Free nearby-place search

%80 done

WHAT WAS ASKED

Nearest repair workshop, parts shop, fuel, charging and tyre service (free data).

MEASURED RESULT

a workshop within 15 km in 20/20 big cities (parts shop 18/20)

WHAT WORKS · HOW IT WAS MEASURED

Test in 20 big cities: at least 1 workshop within 15 km in 20/20, at least 3 in 17/20; parts shop 18/20. (With name search only it was 17/20 and 12/20; OSM tag search fixed it.) OpenStreetMap-listed places only; phone / opening hours often missing.

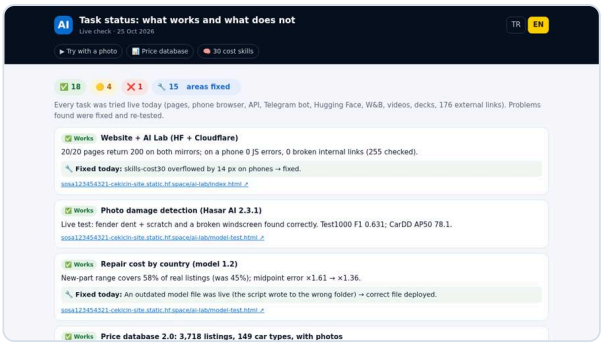

RE-CHECKED TODAY

Live API check, Istanbul (Sultanahmet): 5 workshops returned, e.g. “Yedikule oto kaporta” ✓.

STILL MISSING

Merge with Çekicin's partner-workshop list; add charging stations in the app.

Site demo ↗ | Module section ↗ | Telegram /m5 ↗

🌱 6. Waiting time and environmental impact

%30 done

WHAT WAS ASKED

Effect on waiting time, emissions and road safety.

MEASURED RESULT

simulation only — not validated with real data

WHAT WORKS · HOW IT WAS MEASURED

Open simulator: waiting time and CO_2 are computed from assumptions. Without real response-time data the accuracy cannot be measured. The 70% claim is not proven yet.

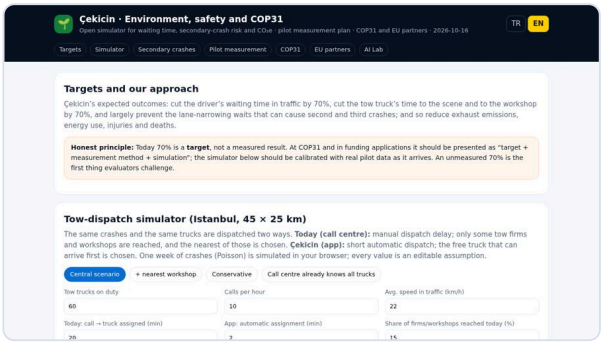

RE-CHECKED TODAY

Simulator page opens ✓. Still a simulation; no real response-time data yet.

STILL MISSING

Pilot: real call → arrival times (Çekicin logs), measured with an emissions model.

Site demo ↗ | Module section ↗ | Telegram /m6 ↗

Also delivered

- 🚛 **Tow truck or roadside help?** — Rule-based decision after 3 short questions · 21/21 scenario tests pass · not yet validated with real calls.
- 🤖 **Telegram AI assistant** — Live: photo → damage → 3 questions → decision → nearest service; voice messages; module menu /moduller. WhatsApp: infrastructure ready, needs a Meta business account.
- 🗂 **Price database 2.1** — 3,718 listings · 149 car types · 10 parts · price matches source 99.8% (500-row check) · open dataset.
- ✅ **Live status page** — What works and what does not, with the test of each item: 18 working · 4 partial · 1 not working.

Next steps to go from demo to product

1. Integrate modules 1, 2, 3 and 5 into the Çekicin app (API is ready).
2. Train and calibrate on Çekicin's own photos, invoices / assessor reports and call logs (KVKK consent).
3. Spoken Turkish answers (TTS) and a phone-line / call-centre connection.
4. Supplier agreements for live stock and prices; merge Çekicin's partner workshops.
5. Pilot to measure real waiting time and CO_2 (proves or corrects module 6).
